Application No. 09/845,810 Page 2 of 5

IN THE CLAIMS

Please replace all prior claims in the present application with the following claims, in which claims 1-16 have been canceled, and claim 17 is currently amended.

1-16. (Canceled).

17. (Currently Amended) A method of permitting customized end-user interaction with a call service in an intelligent network, comprising:

collecting user input information needed to establish the call service; (F8^{2ħ}, 100) providing the collected user inputs to a service control point associated with the call service; and (F8^{2ħ}, 150)

outputting information through a standardized interface between the service control point and an intelligent peripheral, wherein the information is associated with the call service in a manner customized with respect to a given user through a set of configurable parameters at said intelligent peripheral unit thereby enabling play out of output information in different formats dependent on a given user.

- 18. (Original) The method according to claim 17, wherein collecting user input information comprises collecting one or more of DTMF tones, analog pulses, and verbalized speech.
- 19. (Original) The method according to claim 17, wherein outputting information comprises outputting at least one of a recorded message and spontaneously-generated speech.
- 20. (Original) The method according to claim 19, wherein outputting spontaneously-generated speech comprises concatenating a string of recorded speech segments.

Application No. 09/845,810 Page 3 of 5

A

21. (Original) The method according to claim 17, wherein outputting information associated with the call service in a manner customized with respect to a given user comprises outputting information having a form corresponding to the given user's geographic location.
